(pages 266-267) Key Concept: Weathering, erosion, and deposition act together in a cycle that wears down and builds up Earth's surface. • Erosion is the movement of pieces of rock and other materials on Earth's surface.

Changing Earth's Surface - ISD 15

Deposition also occurs during floods. When rain falls, some water soaks into the ground, filling openings in soil and cracks in rocks. This underground water is called groundwater. Groundwater can cause erosion through a process of chemical weathering. Over time, this weathering can develop into caves or caverns and also result in deposition.
