The Sentra had an SR20DE Which was a dual overhead cam engine. According to Nissan, setting the timing on this engine requires the use of a scan tool as part of the procedure. There is no procedure for setting it without a scann tool. The timing for this engine is 15 dedrees +/- 2 degrees @700RPM The other engine this

You need the marker on the timing belt cover to get the correct timing. Without the marks, you would have to remove the pulley to check the crank pulley timing mark for TDC and then make your mark on the cover. On the pulley, the first mark on the left of pulley is 0 with increment of 5 degrees. Ignition timing
