Theories Of Landform Development

L.C. King's theory of landform development is based on his studies of landforms in arid, semi-arid and savanna regions of South Africa. He formulated a set of cyclic models (such as landscape cycle, epigene cycle, pediplanation cycle, hillslope cycle, etc.) and asserted that these are practicable in other parts of globe as well.

put forward his thesis of landform evolution in 1924. His main work was in the German language which was translated into English (Czech and Boswell 1953). Penck criticised and opposed the cycle concept of Davis. In fact, Davis and Penck saw geomorphology through different eyes.

Brief notes on Penck's Model of Landform Evolution

His geomorphic cycle model was inspired by theories of uniformitarianism and attempted to theorize the development of various landform features. Davis's theories were important in launching the field of geomorphology and were innovative at the time, as a new way to explain physical landform features.
